Demonstrations or Sample available upon request.

- UK made patented restrictor designed to work with any standard track friction stay.
- Can be used as either a removable or permanent restrictor device.
- Available in 430 (ferretic) or 316 (austenitic) Stainless Steel.
- Fully concealed in the friction stay track.
- Locking blocks are made of die cast zinc, all other parts are stainless steel.
- Available in domestic or commercial versions.
- Available in 3 standard lengths, but a 'Made to Measure' option is available for specific contracts.
- Commercial version with additional security block, offers ventilation with high security.
- No additional fixings required.
- No drilling required.
- No need to stock restricted stays.
- Can be retrofitted on site.
